

The Microsoft Kinect addition is considered among the best Xbox 360 companions. Its presentation in the most recent E3 gaming conference was a big hit and has reflected on sales revenue for Microsoft. It is a motion-tracking camera which is placed near the TV and plugged into the Xbox 360 (it works with the other versions too). There are a few third party accessories that improve the mounting.

Some retailers have reported shortage of inventory to supply the demand for the device. With all of its popularity we thought it was only necessary to report on the upcoming announced games for the upcoming year. This list is not comprehensive and does not include games that have been released for the kinect already or have been announced to be released in 2010. We will just have to wait and see if the popularity of the Kinect system overshadows its main competitor, the Playstation Move system. So far Microsoft should not be too disappointed.

UPDATE:The list has been updated April 29, 2011
